

# Flying Leads

Flying leads deployed with the use of ROV's, are increasingly being specified for use with deepwater subsea production systems. As with production control umbilicals, they form critical links in subsea production systems

## Design and Manufacture

- Designed for optimal flexibility
- Manufactured using Steel Tube or Thermoplastic Hose components
- Ideal for Diver and ROV Installations
- Multiple Flying Leads designed to be utilised in shallow, deep and ultra deepwater
- Installation Engineering in conjunction with development of installation methods
